How to fix sputtering in your engine's idle

Engine misfiring or stumbling is a sign that your car is not getting enough power from the engine during acceleration. A car sputters when accelerating due to the fact air and fuel is not being properly mixed, therefore, forcing the car to run on unburned fuel.

Why Car Sputters When Accelerating? - Paul's Gigantic Garage

When the engine idles, the carb butterflies are closed. The idle air is provided through the holes in the butterflies. Special dedicated idle passages cast in the upper carb body provide fuel through them-they are very small. Over years of time, they can reduce in size due to dried fuel.

miss/sputter/hesitation at idle but runs fine at higher ...

Another possible culprit is a faulty component affecting the air-fuel mixture like a bad oxygen sensor, throttle position sensor or engine temperature sensor. The steps suggested below will help you solve the most common cases of a sputtering car engine. Step 1 Inspect the components on the secondary ignition system.

How to Fix a Sputtering Car Engine | It Still Runs

PROBLEM: The engine stalls in neutral, at idle, only. When your outboard starts right up, keeps running with throttle applied in neutral, but shuts down the moment you come back to idle speed in neutral, the issue is likely to be a sticky or broken AIS (automatic idle speed) valve.

5 Outboard Engine Quick Fix Tips - boats.com

Dirt in the system as well as bad fluids will make the mower perform inefficiently. Sputtering of the engine while mowing is often an indication of bad mower maintenance, not a fault with the machine. Most repairs to stop sputter are cheap and part of your regular mower maintenance. Video of the Day

How to Fix a Sputtering Lawnmower | Hunker

The misfire will usually reappear, either under specific operating conditions or randomly. A misfire may occur when your engine is idling, causing a rough or uneven idle. Misfires and rough idling are difficult problems to isolate, since they can be caused by many system malfunctions.

Boat Engine Rough Idle Troubleshooting | Champion Auto Parts

Based strictly off your description my first thought is the PCV disc, built into the cam cover, has failed. When it fails a vacuum leak results and is generally described as a whistle sound occurring at idle only, a check engine light and rough idle result in conjunction.

Service Engine Light On, Sputtering on Idle, Squealing ...

If the SES code you pulled has so many symptoms, how do you know that it may not be contributing to your sputtering? Your sputtering could be related to your MAF also, but at least clear up the cause of your SES codes, before throwing parts at the car.

2.5 altima sputtering at idle? | The Nissan Club

If your outboard engine is sputtering at any speed, idle or full throttle, it could be the result of several common malfunctions. You may need to make a few timing adjustments or replace a spark plug, or you may need serious mechanical inquiry.

Why Does My Outboard Sputter at Full Throttle? | It Still Runs

An engine running out of gas will definitely sputter but if the gas gauge indicates full, the problem lies deeper inside the engine compartment. An incomplete combustion in the engine will cause a sputter as can the ignition system. The fuel system, such as a blocked fuel injector may also cause the vehicle to sputter.

Engine is sputtering Inspection Service & Cost

The IAC valve controls the engine's idle speed under all conditions. For example, when you come to a stop with the AC on, the compressor puts a load on the engine. This load can cause the engine to idle rough. The job of the IAC valve is to slightly bump the idle speed up so the engine idles smoothly.

Sputter/Shake On Idle In Drive with AC On - Maintenance ...

In my case, the engine would start just fine, but within a few minutes, the engine warning light would come on concurrent with a very rough idle. The engine would sputter and die soon thereafter if I didn't give it some throttle manually.

Engine management lights comes on in idle - Talk Morgan ...

The idle air control valve monitors the air intake as it is mixed with fuel prior to being injected into the engine. This valve is controlled by the vehicle's computer which will adjust idle speed based upon other measurements such as engine temperature, intake air temperature and electrical system load or voltage.
