### Hertzsprung-Russell Diagram - NAAP

The fundamental tool for presentation of the diversity of stellar types and for understanding the interrelations between the different kinds of stars is the Hertzsprung-Russell Diagram (abbreviated HR diagram or HRD), a plot of stellar luminosity or absolute magnitude versus spectral type, stellar surface temperature, or stellar color.

These are some suggested answers for the questions asked on the student sheet. Part One. What variables does the HR Diagram compare? Luminosity and temperature; Describe why it is possible to relate the temperature of a star to its luminosity, or brightness. Stars that are hotter should be brighter than stars that are cooler.

One of the best ways to summarize all of these details about how a star or protostar changes with time is to use a Hertzsprung-Russell (H-R) diagram. Recall from The Stars: A Celestial Census that, when looking at an H-R diagram, the temperature (the horizontal axis) is plotted increasing toward the left. As a star goes through the stages of its life, its luminosity and temperature change.
